

# HEALTH TOURISM

## Abstract :

Health tourism is a web application that is developed using Python Django framework for the clients to know about the Ayurvedic tourism in Kerala. As you know kerala is Gods own country and has got traditional health packages that is available for the tourists as well as for the natives. They can also see all the information regarding the packages as well as search for the packages and register the packages. Also the user can search for tourism packages that are available in kerala as well as the pilgrim packages.

## Modules:

- Admin module : An admin can add ayurvedic places, tourism places, as well as pilgrim packages into the system. The admin can confirm the user registration as well as his package requests. Admin can add more images into the packages and places.
- Registered User : The registered user can see all the information regarding the packages and the client will be able to apply for the packages that are available. The user can choose his own time and date for the package.
- General User : The clients can see the package without Registration. But the client wont get more information about that. The client needs more information regarding that then they should register to the application.
